Essential Questions	Enduring Understandings	Domain	Cluster	Standard	Learning Targets	Assessment Formative and Summative	Inter-disciplinary Connections	21 <sup>st</sup> Century Connections
<b>Unit 1 – Transformations</b>						Common unit test, mathematical reflections, quizzes		
<b>Pacing - 23 days</b>								
What situations can be analyzed using transformations and symmetries?	Shape and area can be conserved during mathematical transformations.	Geometry  SMP 3 – Construct viable arguments and critique the reasoning of others	Understand congruence and similarity using physical models, transparencies, or geometry software.	8.G.1 - Verify experimentally the properties of rotations, reflections and translations.	Recognize symmetry in design; determine the design element that has been reflected, rotated, or translated to produce a design with symmetry.	How would you explain to someone what it means for a figure to have reflection symmetry, rotation symmetry, translation symmetry?		9.1.8.A.1 - Develop strategies to reinforce positive attitudes and productive behaviors that impact critical thinking and problem-solving skills.
How can we best represent and verify geometric/algebraic relationships?	Coordinate geometry can be used to represent and verify geometric/algebraic relationships.	Geometry  SMP 2 – Reason abstractly and quantitatively  SMP 3 – Construct viable arguments and critique the reasoning of others	Understand congruence and similarity using physical models, transparencies, or geometry software.	8.G.1 - Verify experimentally the properties of rotations, reflections and translations.  8.G.3 - Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.	Describe rigid motions in words and with coordinate rules.	What is the image of a point $(x,y)$ under each transformation: a reflection in the $y$ -axis, a reflection in the $x$ -axis, a reflection in the line $y=x$ , a $90^\circ$ counterclockwise rotation about the origin, a $180^\circ$ counterclockwise rotation about the origin, a $270^\circ$ counterclockwise rotation about the origin, a $360^\circ$ counterclockwise		9.1.8.B.1 - Use multiple points of view to create alternative solutions.

						rotation about the origin, a translation that slides (1,2) onto (3, -2), a translation 6 units to the left followed by a translation 2 units down, a 90° counterclockwise rotation about the origin followed by a reflection in the y-axis.		
How can spatial relationships be described by careful use of geometric language?	Geometric properties can be used to construct geometric figures.	Geometry SMP 2 – Reason abstractly and quantitatively  SMP 3 – Construct viable arguments and critique the reasoning of others	Understand congruence and similarity using physical models, transparencies, or geometry software.	8.G.1 - Verify experimentally the properties of rotations, reflections and translations.  8.G.1.a – Lines are transformed to lines and line segments to line segment of the same length 8.G.1.b – Angles are transformed to angles of the same measure 8.G.1.c – Parallel lines are transformed to parallel lines  8.G.2 - Understand that a two-	Relate rigid motions to the concept of symmetry and congruence of figures.	What does it mean to say that two geometric figures are congruent? How can you use symmetry transformations to show that two figures are congruent?		9.1.8.A.1 - Develop strategies to reinforce positive attitudes and productive behaviors that impact critical thinking and problem-solving skills.

				dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them.				
How can spatial relationships be described by careful use of geometric language?	Geometric properties can be used to construct geometric figures.	Geometry SMP 2 – Reason abstractly and quantitatively SMP 3 – Construct viable arguments and critique the reasoning of others	Understand congruence and similarity using physical models, transparencies, or geometry software.	8.G.3 - Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.	Describe the effects of translations, rotations, reflections, and dilations on two-dimensional figures using coordinates.	Identify figures on a graph as enlargements or reductions and give the scale factor.		9.1.8.A.1 - Develop strategies to reinforce positive attitudes and productive behaviors that impact critical thinking and problem-solving skills.
How can spatial relationships be described by careful use of geometric language?	Geometric properties can be used to construct geometric figures.	Geometry	Understand congruence and similarity using physical models, transparencies, or geometry software.	8.G.4 - Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations,	Describe the sequence of translations, rotations, reflections, or dilations that exhibits the similarity of two similar figures.	Describe a sequence of transformations that proves figure <i>A</i> is similar to figure <i>B</i> .		9.1.8.A.1 - Develop strategies to reinforce positive attitudes and productive behaviors that impact

				reflections, translations, and dilations; given two similar two dimensional figures, describe a sequence that exhibits the similarity between them.				critical thinking and problem-solving skills.
<b>Unit 2 - Geometry Topics</b> <b>Pacing - 12 days</b>						Common unit test, mathematical reflections, quizzes		
How can measurements be used to solve problems?	Measurements can be used to describe, compare, and make sense of phenomena.	Geometry  SMP 2 – Reason abstractly and quantitatively  SMP 5 – Use appropriate tools strategically	Understand congruence and similarity using physical models, transparencies, or geometry software.	8.G.5 - Use informal arguments to establish facts about angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles.	Using facts about angle sum and exterior angle of triangles, the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles, find the measurements of angles.	How would you explain the relationships of the angles created when parallel lines are cut by a transversal? Include the relationships of the similar triangles created.	W.8.1 - Write arguments to support claims with clear reasons and relevant evidence.	9.1.8.A.1 - Develop strategies to reinforce positive attitudes and productive behaviors that impact critical thinking and problem-solving skills.
How can measurements be used to solve problems?	Measurements can be used to describe, compare, and make sense of phenomena.	Geometry  SMP 1 – Make sense of problems and persevere to solve them  SMP 2 – Reason abstractly and	Solve real world and mathematical problems involving volume of cylinders, cones, and spheres.	8.G.9 - Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.	Calculate the volumes of cones, cylinders, and spheres, and use them to solve problems.	Explain how to use the formulas to calculate volumes of cones, cylinders, and spheres.	W.8.1 - Write arguments to support claims with clear reasons and relevant evidence.

				of change and initial value of the function from a description of a relationship or from two $(x, y)$ values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.				
How are patterns of change related to the behavior of functions?  What makes an algebraic algorithm both effective and efficient?	Patterns and relationships can be represented graphically, numerically, symbolically, or verbally.  Algebraic and numeric procedures are interconnected and build on one another to produce a coherent whole.	Expressions and Equations  Functions  SMP 5 – Use appropriate tools strategically  SMP 6 – Attend to precision	Analyze and solve linear equations and pairs of simultaneous linear equations.  Define, evaluate, and compare functions	8.EE.7 - Solve linear equations in one variable.  8.F.3 - Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear.  8.F.5 - Describe	Solve linear equations.	How would you find the equation for linear relationship from each of these: a verbal description, a table of values, a graph?		9.1.8.A.2 - Implement problem-solving strategies to solve a problem in school or the community.

Essential Questions	Enduring Understandings	Domain	Cluster	Standard	Learning Targets	Assessment Formative and Summative	Inter-disciplinary Connections	21 <sup>st</sup> Century Connections
		Construct viable arguments and critique the reasoning of others  SMP 4 – Model with mathematics		quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association.  8.SP.2 – Know that straight lines are widely used to model relationships between quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit (e.g., line of best fit) by judging the closeness of the data points to the line.		information.	and demonstrating an understanding of the topic or text.	adults in the United States and in other countries.
How can experimental and theoretical probabilities be used to make predictions or draw conclusions?	The results of a statistical investigation can be used to support or refute an argument.	Statistics and Probability  SMP 1 – Make sense of problems and persevere to solve them	Investigate patterns of association in bivariate data.	8.SP.4 - Understand that patterns of association can also be seen in bivariate categorical data by displaying	Construct and interpret two-way tables summarizing bivariate categorical data, including relative frequencies.	Make a two-way table using given data and describe what the relative frequencies tell you about the data.	W.8.1.b - Write arguments to support claims with clear reasons and relevant evidence.	9.1.8.E.4 - Compare and contrast ways governments regulate media advertising to protect
